EXPERIENCE

- E-Commerce Collections, USA | AI Automation Developer (Remote)****April 2026 - Present**
- Designed Retrieval Augmented Generation solutions using vector databases and structured knowledge repositories.
 - Designed lead intelligence platforms combining prospect research, enrichment, qualification, and CRM synchronization.
 - Developed competitor intelligence automation for continuous market monitoring and strategic business reporting.
 - Architected multi agent automation systems integrating LLMs, APIs, databases, and business applications.
 - Designed and developed an enterprise AI powered product listing automation platform that generates SEO optimized product titles, descriptions, feature bullet points, metadata, keywords, main product images, lifestyle images, infographics, use case visuals, and marketplace ready content through an automated n8n workflow integrated with AI image generation models, large language models, ecommerce platforms, and cloud storage, reducing manual product listing effort while ensuring consistency, scalability, and production quality.
 - Developed an AI powered Google Search Console automation system to monitor keyword rankings, position changes, clicks, impressions, CTR, indexing status, and generate automated SEO insights, alerts, and optimization recommendations.

Progress with AI, Pune | AI Automation & Web Developer (Full-Time)

July 2024 - April 2026

- Worked on full stack automation projects where manual work was completely removed and replaced with automated voice systems that run on their own without manual setup.
- Built and deployed AI agents to automate repetitive business tasks, improving response times and reducing manual workload by 40%.
- Integrated AI agents with internal systems using n8n and API workflows, enabling smart decision-making and process automation.
- Developed internal web tools and dashboards using Next.js and React.js to support real-time monitoring of automation systems.
- Built and optimized scalable React.js applications, improving performance by ~30% using Redux, GraphQL, and component-level enhancements.
- Led code reviews, maintained shared UI libraries, and contributed to CI/CD testing pipelines, ensuring quality and deployment speed.

10xgrow.ai, USA | AI Agent Automation (Part Time, Remote)

Nov 2025 - Dec 2025

- Developed production grade AI voice agents using n8n and Python backend, integrating real time speech processing, conversational AI, workflow orchestration, API integrations, CRM synchronization, and intelligent business automation.

Lovenspire, USA | AI Automation Engineer (Part Time, Remote)

Nov 2025 - April 2026

- Managed and monitored 5,000+ Amazon product listings, converting manual report checks into automated workflows to improve accuracy and save time.
- Optimized Amazon product listings while following Amazon seller policies and guidelines to ensure account safety and performance.

PROJECTS

Voice-Based Appointment Booking System

Tech Stack: n8n, ElevenLabs, Cal.com

- Built a voice-activated scheduling system using n8n, ElevenLabs AI, and Cal.com, enabling users to book appointments via phone without human support.
- Let users book appointments by speaking on a phone call, without needing to talk to a person.
- Made the booking process faster and easier by checking available times and confirming automatically.

24/7 AI Sales Assistant

Tech Stack: n8n, APIs, Email/SMS Integrations

- Built a 24/7 Automated Sales Assistant with n8n that captures leads and sends follow-up emails/SMS automatically.
- Helped sales teams save time and manage leads better with an organized, always-on automation system.

Automated Proposal Template System

Tech Stack: n8n, OpenAI (GPT-4o), Google Slides, Gmail

- Created an Automated Proposal Template System with n8n and Google Slides that turns form inputs into ready-to-share proposals.
- Saved time by removing manual editing, with proposals auto-filled and sent through Gmail in one workflow.

Automated Lead Generation via Google Maps (No Paid APIs)

Tech Stack: n8n, JavaScript, Google Sheets, Web Scraping

- Created a lead generation system using n8n that scrapes business details from Google Maps search results without using paid APIs.
- Automated the extraction of emails, phone numbers, and business data using regex parsing and custom JavaScript nodes.

AI-Powered Restaurant Website

Tech Stack: React.js, AI Agents, CSS/Sass, Responsive Design

- Built a restaurant website with React.js and Sass, fully responsive and working across all devices and browsers.
- Added an AI agent for 24/7 customer support, helping with reservations, menu questions, and basic queries.

Solar Company Website

Tech Stack: Next.js

- Built a fast-loading, SEO-friendly solar energy website using Next.js, featuring dynamic pages for products, services, and customer inquiries.
